FIXFLOW3-R4B Runtime Defect Map - Tree5/END

Nguồn audit: 2 video runtime full + các screenshot lỗi Tree5/END. Mục tiêu R4B: specialized content đúng nghiệp vụ, runtime state trung thực, END đúng nghĩa, không seed/demo leak, và loại bỏ vạch ngang chia ô ở Tree5.

R4B acceptance gates

- Specialized intent không được rơi vào generic blind panel.
- Input/chat node có semantic intent rõ phải đi qua specialized runtime component trước.
- Sticker của tôi không dùng seed/demo inventory hoặc điểm hard-code.
- Runtime dependency phải trả loading / ready / empty / config / permission / unavailable / error; không trả màn trắng.
- Tree5 là một workspace liên tục: không có border-bottom/vạch ngang ngăn breadcrumb với content.
- END phải dùng nghĩa nghiệp vụ: Save & Publish, Create Room, Create Gift, Save Profile, Apply Graphic... thay vì Apply chung khi có thể xác định.
